cisco set client.crack.zipQ: how to extract data from a ndarray in one line? Is there a way to extract data from an array in one line? def __getitem__(self,i): return (i[0], i[1]) Now I can extract an element like this: a=np.array([[1,2], [3,4], [5,6]]) a[0][0] But I'd like to know if there is a way to do this in one line, as (i[0,1]) A: We can do this in one line with zip() and np.split(): import numpy as np a = np.array([[1,2], [3,4], [5,6]]) (a[0], a[1]) # (1, 2) (a[0], a[1], a[2]) # (1, 2, 3) Do note that this will always be a list of length 3. If you want a list of length 2, use: a = np.array([[1,2], [3,4], [5,6]]) (a[0], a[1]) # (1, 2) (a[0], a[1], a[2], a[-1]) # (1, 2, 3) Q: What is the relationship of tungsten carbide to carbon steel? We use both steel and tungsten carbide (TWC) drills in machining. I have seen that carbide is used instead of steel for drilling in abrasives like sand, and I think that it is useful for this purpose. However, when I was preparing a cast iron part for rough machining (ie: drills and reamers), I noticed that the face of the part was covered with a layer of iron. I initially thought that the carbon steel part had rust but then I noticed that the rust was covered in a thin layer of iron oxide. As noted in the comments, there is plenty of iron in the alloy. I did not assume that any carbon steel would be carbon free, but would carbon steel have enough carbide to even out a layer of oxide that thick

Advertisements Category:MercedesImage: From Wikipedia, the free encyclopedia Biography Maksim Zaslavsky was born on March 4, 1977, in Moscow, Russia, to a Protestant Russian family. His father Yuri Zaslavsky was a composer and pianist who served in the Russian Foreign Ministry and worked for the composer Dmitri Shostakovich. In his first years Zaslavsky began playing the keyboard at the age of seven with the help of the teacher of his kindergarten Alexander Savitskiy. He studied music in Russia and Germany. His compositional style is characterized by original harmonies, progressions, rhythmic patterns and melodic lines. His music often reflects the character of his native Russia with its folklore and peasant influences. He gained international recognition in 1998 at the age of 23, when he was selected by the Swedish Radio Symphony Orchestra to record a new repertoire of works of Sergei Prokofiev. At that time he was already a Composer-in-Residence with the Minnesota Orchestra and the Chicago Symphony Orchestra.Methyl iodide is an extremely powerful and persistent chemical. This Week's Session launched a long-term, five-year, $15 million program to research the

chemical's global climate effects. A video about the program can be found here, via the Environmental Defense Fund. Some highlights of the session Patrick Moriarty, Minnesota Pollution Control Agency: "It is likely that iodine is having a negative impact on the acidity of the soil. Iodine is a very simple molecule to oxidize. It can act as a weak oxidant. In the soil, iodine is a natural oxidant. It's oxidizing the chlorine from the phosphate. This forms ICl, which reduces the amount of phosphate available in the soil and causes the pH to decrease. For five years, we're actually going to keep running the reactors under really controlled conditions and test the reactions that are happening to see if we can come up with a series of chemical experiments that explain what's going on." Andrew Betschel, Purdue University: "Growers can be more tolerant of pH in their soils. They can plant other things that can tolerate the pH change. They can plant those susceptible crops that are not tolerant of the pH." "These events, they are happening every d0c515b9f4
